

## Co-branding Primary Lock-up with Location and Date

In situations where World Wheelchair Rugby appears locked-up with other logos, prioritise the primary, horizontal lock-up.

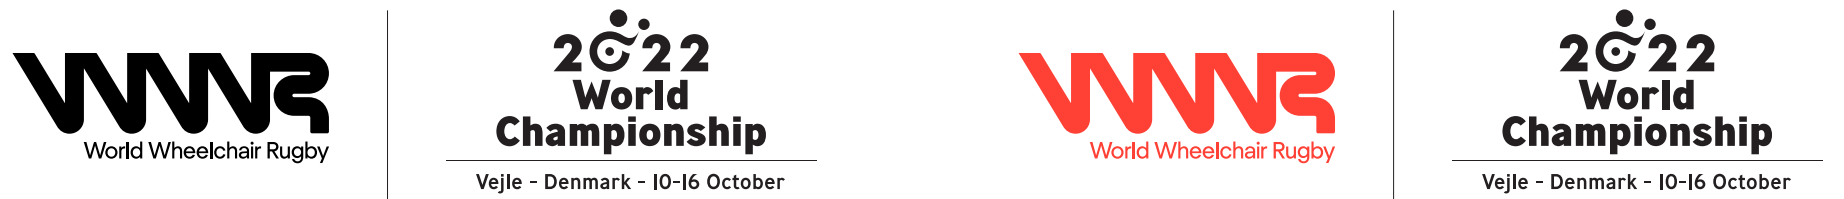

Follow this page closely for sizing and proportions in relation to each other and the separator.

Note: Ensure the weight of the divider line matches the weight of the lines above and below the event location and date.

Primary lock-up spacing

Alternative colour options

Both logos set in black achieves visual balance between the two.

The WWR should be set in electric red if it requires primary prominence. In this instance, the World Championship logo should be set in black to prevent the shades of red in each logo clashing.

## Co-branding Secondary Lock-up

In instances when the primary horizontal lock-up does not fit the application format, use the secondary vertical lock-up.

Follow this page closely for sizing and proportions in relation to each other and the separator.
